

Data used to compile
Tennessee Nursing

Home Trends was obtained from summary tabulations of the **Joint Annual Report of Nursing Homes**.

Individual reports are completed each year by the licensed nursing homes in Tennessee and returned to the Office of Health Statistics and Research for compilation and review. While the compiled information of all licensed nursing homes is quite detailed, data summarized for this report focuses on trends and changes in Tennessee nursing homes for the period 1990-1998.

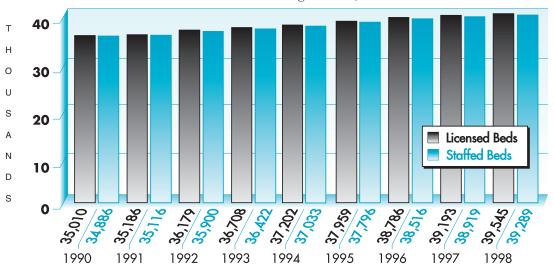

As Tennessee's older adult population increases, the additional need for nursing home care has become an important issue. In 1980, 11.3 percent of Tennessee's population was 65 years and older, and by 1990, this proportion had increased to 12.7 percent. In 1998, 13.0 percent of Tennessee's population was 65 and older, and by the year 2000, this population group is projected to be 13.1 percent of the total.

Submitted reports indicate that the total number of Tennessee nursing homes steadily increased from 1990 to 1998. The number of non-profit nursing homes increased 48.3 percent from 58 in 1990, to 86 in 1998. The number of for profit nursing homes increased 11.2 percent from 215 to 239 for the same period. Government nursing homes remained fairly constant over the period of 1990-1996, but the number increased to 37 for 1998. Corporation/ association nursing homes increased for both non-profit (82.1 percent) and for profit (37.9 percent) Tennessee nursing homes from 1990-1998.

Number of Licensed and Staffed Beds

Tennessee Nursing Homes, 1990-1998

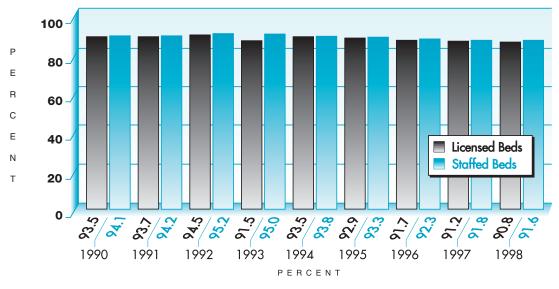

The reported number of both licensed and staffed beds for Tennessee nursing homes increased over the period 1990 to 1998. In 1990, there were 35,010 licensed nursing home beds, but this number increased 13.0 percent to 39,545 in 1998. The reported number of staffed beds increased 12.6 percent from 34,886 in 1990 to 39,289 in 1998.

Licensed beds - The maximum number of beds authorized by the state licensing agency or regulated by a federal agency.

Staffed beds - The total number of beds set up, staffed, and in use at the end of the reporting period. This number should be less than or equal to the number of licensed beds.

Percent Occupancy For Licensed and Staffed Beds

Tennessee Nursing Homes, 1990-1998

Percent occupancy is computed as the number of patient days of care divided by the number of bed days open for licensed or staffed beds, multiplied by 100. For the period 1990 through 1992, the percent occupancy for both licensed and staffed beds increased. The percentages then fluctuated from 1993 through 1995, and decreased for both licensed and staffed beds through 1998 when the percent occupancy for Tennessee nursing homes based on licensed beds and staffed beds dropped to 90.8 and 91.6 respectively.

Admissions are the number of patients admitted to a facility during the reporting period. Nursing home admissions increased from 29,488 in 1990 to 60,158 in 1998. Discharges are the number of patients discharged plus all deaths. The reported number of discharges increased from 27,400 in 1990 to 60,330 in 1998. Nursing home admissions and discharges increased gradually from 1990 to 1992, but from 1993 to 1998, admissions increased 77.8 percent and discharges increased 81.3 percent. Discharge patient days are

NURSING HOME ADMISSIONS, DISCHARGES AND DISCHARGE PATIENT DAYS

Tennessee, 1990-1998

Year	Admissions	Discharges Including Deaths	Discharge Patient Days		
1998	60,158	60,330	11,544,940		
1997	58,380	58,386	12,091,990		
1996	51,109	50,554	11,989,394

AVERAGE DAILY CENSUS, AVERAGE LENGTH OF STAY RATE OF PATIENT TURNOVER

Tennessee Nursing Homes, 1990-1998

Termessee Tvursing Florites, 1770-1770									
Year	Average Daily Census	Average Length of Stay	Rate of Patient Turnover						
1998	35,593	195	1.54						
1997	35,199	211	1.50						
1996	34,904	245	1.33						
1995	34,595	277	1.20						
1994	34,254	296	1.06						
1993	34,075	346	0.93						
1992	33,599	351	0.86						
1991	32,707	364	0.83						
1990	31,797	363	0.85						

the total number of days of care rendered to patients discharged during the reporting period (including days of care rendered prior to the beginning of the reporting period). The reported number of discharge patient days decreased from 1997 to 1998.

The average daily census and the rate of patient turnover increased over the period 1990 through 1998, while the average length of stay decreased. The average daily census is calculated as

the number of patient days of care divided by the number of days in the calendar year. The average length of stay is calculated as the number of discharge patient days divided by the number of discharges. The rate of patient turnover is the number of admissions divided by the number of staffed beds.

Patient census data is reported for December 31 of each indicated year. The number of nursing home patients is given by five-year age group, as well as by gender.

NUMBER OF NURSING HOME PATIENTS BY GENDER AND AGE

Tennessee, 1990-1998

100+	310	314	320	321	328	337	335	354	323

Totals may include patients with age unknown.

The number of admissions to
Tennessee nursing homes increased 104
percent while the number of discharges
increased 120 percent during the time
period of 1990-1998. This is much
greater than what any increase in elderly
population would indicate. At the same
time, average length of stay has dropped
by 46 percent and rate of patient turnover
has increased by 81 percent, while
average daily census only increased by 12
percent. This indicates that nursing home
services in Tennessee are now being used
by more persons for shorter episodes of
care.

Many persons are now entering nursing homes for convalescence, then are

leaving for home or other settings. This can be attributed to the fact that more hospitals are discharging patients, especially the elderly patients, to the less medically intense nursing home setting for a longer recuperation period after initial acute care treatment. In fact, many hospitals have converted excess bed capacity into skilled nursing unit beds licensed as nursing home beds. The situation is further reflected in hospital statistics which have shown a decrease in utilization over this same time frame.

Percent occupancy for Tennessee nursing homes remained high over the 1990-1998 time period, fluctuating between 91 to 95 percent. High occupancy is typical for the nursing home industry and appears to be invariant even with other changes occurring with growth. The demand for nursing home services has kept pace with increased resources provided.

The Department of Health will continue to collect nursing home data through its Joint Annual Report of Nursing Home annual survey. This data and those from other surveys will be monitored as changes in the delivery of health care in Tennessee evolve. More detailed utilization statistics and data on individual nursing homes are publicly available through the Office of Health Statistics and Research or visit our website at the address indicated below.

POPULATION AGED 65 AND OLDER									
1990	1991	1992	1993	1994	1995	1996	1997	1998	
618,818	630,117	640,943	652,546	664,730	676,640	687,895	696,511	706,669	

NOTE: The population estimates for Tennessee used to calculate the rates in this report were based on estimates prepared from the 1990 census by the Department of Sociology at the University of Tennessee in Knoxville. On March 19, 1999, population projections were revised by Health Statistics and Research. These revised projection figures were based on updated county total estimates released by the Bureau of the Census, and may result in rates that differ from those previously published.
